Rolling Stock Seals

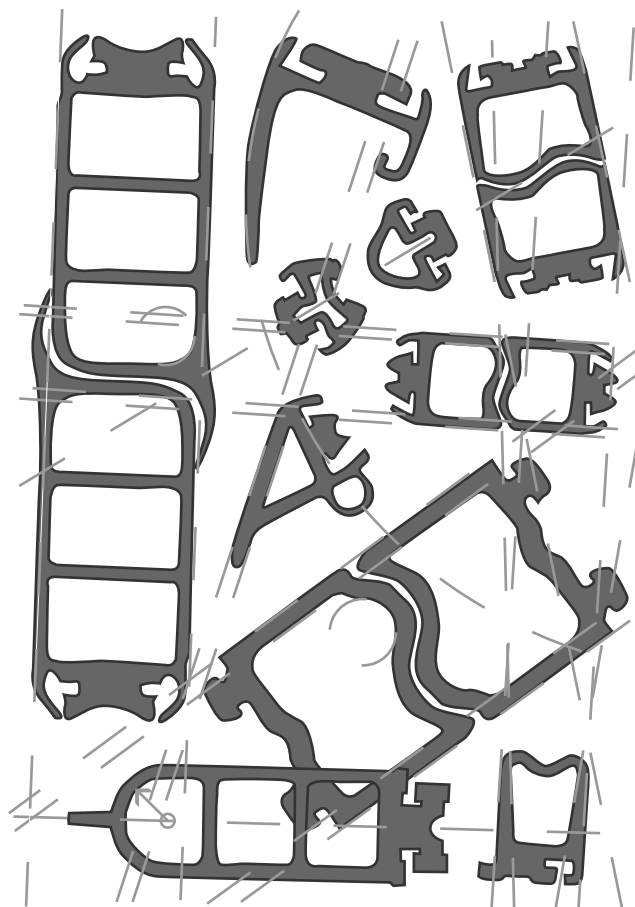

Derby Rubber's sensitive edge door seals are fitted to electro-pneumatically driven doors to protect passengers from injury and to form a weatherproof seal.

Our keyed and key-less window and hatch seals form a weatherproof seal between the glass and any vehicle frame, while also preventing rattle.

Each profile is made to close tolerances, are easy to fit and have strong resistance to tear and environmental aging.

Derby Rubber has developed a range of accredited compounds that meet the latest International Standards for fire, smoke and toxicity resistance whilst maintaining their performance attributes.

Our compounds meet International Standards
